Technical Datasheet
18-0120-000, **Special thinner standard, colorless**

1. Special thinner standard, colorless

1.1 item no, shade of Colour: 18-0120-000

2. General description

2.1 Characteristics: Solvent mixture with flashing point over 21 °C

2.2 Application: For dilution of Polyurethane lacquers, as Basco Prime, Basco Clear, Basco Base

3. Techn. Information:

3.1 Processing: To adjust the process viscosity

3.2 Density: 0.89 g/cm³

3.3 Mixing ratio: 5-20%

4. Processing requirements:

To adjust the process viscosity. Especially if application temperature is over 25 °C or if large objects are being coated to improve the absorption of overspray. To adjust the viscosity of lacquers and to clean or degrease substrate and equipment.

5. Miscellaneous:

Evaporating time : approx. 40

(that means, this liquid needs x times longer to evaporate than Dietyhlether.)

Legal notice

In accordance with the General Conditions of Sale and Delivery, the responsibility of Basler Lacke AG is limited and partially excluded (reference is made to www.basler-lacke.ch). They form an integral part of each supply. In addition, responsibility is declined within the legal limits for any damages resulting of a product being not appropriate for a certain application.

We do not neither assure nor guarantee the suitability of the products for a certain applicability or a certain type of processing. In either case, the buyer has to do preliminary suitability tests in accordance with his operating conditions.

For the proper handling of our products, the current versions of the product and safety data sheets of Berlac AG must be observed. Liability is limited and partially excluded in accordance with the General Terms and Conditions of Sale and Delivery of Berlac AG, which are published at www.berlac.ch and form an integral part of every delivery.
